DETAILED ACTION

Page 2

1. This communication is responsive to preliminary amendment 4/28/06. Claims 1-9 are currently pending in this application.

Specification

2. The abstract of the disclosure is objected to because it should be in a separate page. The abstract provided, is that of the corresponding PCT application and it does not conform to US practice. Correction is required. See MPEP § 608.01(b).

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Art Unit: 2859

5. Claims 1-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Miyajima et al. P.N. 5,256,969 (Miyajima) in view of Jesmanowicz et al. P.N. 6,294,972 (Jesmanowicz).

Miyajima discloses a magnetic resonance imaging system that includes as shown in Fig. 2 a gradient coil system. The gradient coil system includes an inner coil configuration 9, an outer coil configuration 10. Coils 9 and 10 are coaxial and are attached to a tubular body or bobbin 8. As described in col. 9 in connection with Fig. 4, the tubular body 26 is made of stainless steel and features grooves that suppress eddy currents. The stainless steel sheet may be separated for this purpose into discontinuous areas (see 42). The only difference between the claims at issue and the prior art as represented by Miyajima is the orientation of the slits for breaking –up the eddy currents. That is Miyajima shows only helically oriented slits (Fig. 4) while the claims at issue call for axially oriented slits.

This difference would have been obvious to the artisan of ordinary skill in the art in view of Jesmanowicz. Jesmanowicz discloses (see cover drawing) a shield 26 for a gradient coil 25 having axial slits. Since it is known that gradient fields generate deleterious eddy currents in metal objects such as Miyajima's stainless steel tube. It would have been obvious, to the artisan of ordinary skill in the art, to orient the slits axially, as in Jesmanowicz, resulting in the invention as claimed.

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Edelstein et al. discloses a support structure for MRI gradient coils. Note the abstract of the disclosure.

Art Unit: 2859

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Louis M. Arana whose telephone number is (571) 272-2236. The examiner can normally be reached on M-Thurs. Fridays Off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Diego F. Gutierrez can be reached on (571) 272-2245. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
